His enthusiasm for medical innovation shows through his frequent updates on social media and regular posts on the latest news and advice about realising the future of medicine. He was featured among the top 10 healthcare voices on LinkedIn and has over a hundred thousand followers

across his channels.

He also teaches medical students and professionals at Semmelweis University, a leading European medical school and gives masterclasses about disruptive health technology at events such as Stanford Medicine X and Doctors 2.0 And You.

Finally, Bertalan is the founder of Webicina.com, which helps patients and physicians find hand-picked medical news and advice they can trust, for free.

Bertalan's talks

- **Healthcare needs a trip to Mars**

In this keynote, Healthcare needs a trip to Mars, Bertalan argue that we need to create a healthcare system that would even keep an astronaut on Mars alive. We need to use our digital health technologies to make patients the point of care, to let them access their own data, to involve augmented algorithms to help make decisions on the go. That's the only way that we can bring healthcare into the 21st century.

- **Science fiction in healthcare**

See what it feels like to meet science fiction in your life and learn to predict which technologies will shape your industry through one simple habit: asking the what if question.

- **How to be a hero to save healthcare**

Digital health is the cultural transformation that brings healthcare to the 21st century. Why don't you take charge and become the hero to make it happen?

- **Your A.I. prescription**

It is high time to describe how [artificial intelligence](#) will impact medicine and healthcare; why this change is inevitable and what we should do to prepare for working and living with it. This narrative aims to transform uncertainties regarding A.I. into a productive exchange of knowledge between humans and machines. A real deep dive.

- **Healthcare after COVID**

Coronavirus has shattered our world and changed nearly all aspects of our lives. Life will never be the same after COVID-19. Healthcare has also been changed forever. Digital health products have played an important role in the COVID-19 response.

Technologies and concepts from telemedicine through A.I. monitoring to network medicine, all came together in an attempt to try to know, understand and forecast the virus.
